

Quick Start Guide:

Setting up your GigaMesh

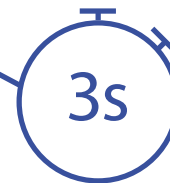

1

Connect GigaMesh to power outlet.

2

When the LED is flashing red, you can pair the GigaMesh with the GigaSpire. Press and hold the WPS buttons on the GigaMesh and then on the GigaSpire for 3 seconds each (less than 30 seconds apart). The LEDs flash green while attempting to pair.

3

Use the solid green LED indicator (displays for 60 seconds at end of pairing cycle) to determine ideal location for the GigaMesh. If necessary, relocate it to a more ideal distance from the GigaSpire and confirm successful pairing after the GigaMesh reboots (repeating steps 2-3 as needed).

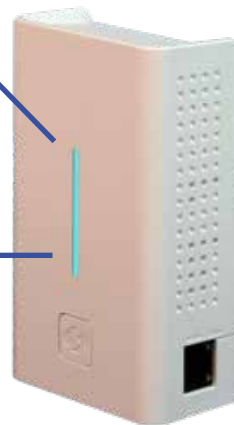

GigaMesh location is ideal distance from GigaSpire.

Move GigaMesh closer to GigaSpire.

Move GigaMesh farther away from GigaSpire.

4

If applicable, use the CCFiber SmartIQ app to set up the GigaSpire. See the CCFiber SmartIQ Quick Start Guide for guidance.
